

Materials

MATERIALS	NATURAL	MAN-MADE
Where do they come from?	plants, animals, rocks	chemical processes
examples	wood, rubber, fur, leather, iron, gold	plastic, synthetic cloth, glass, paper, steel, asphalt
products	chair, balloon, T-shirts, coat, shoes, knife, earrings	ruler, umbrella, bottle, book, bridge, road
What is good about them?	They do not pollute environment a lot because they can recycle naturally.	They are not expensive, most of them last longer and they do not change easily.
What is bad about them?	They are not always long lasting, they can change (rot, rust or tear).	People must recycle them or they pollute the environment.

Task: Look at the information about different materials. Write a short text.

- In the first paragraph, explain the difference between natural and man-made materials.
- In the second paragraph, give examples and products which we get from each.
- In the third and fourth paragraphs write about the good and bad sides of using natural or man-made materials.
